

Your Dental Insurance

Get the most

The signs of fall signal back-to-work and back-to-school for many of us. They should also be a cue to make a dental appointment because your dental insurance has seasons too. More than 90% of dental plans are based on a calendar year. If you do not use the benefits you are entitled to, they are gone as of December 31st. Your benefits are not carried forward into the next year.

If you are thinking about getting some dental care sometime this year, now's the time. Many treatments can take weeks to complete once treatment options are sorted out and insurance considerations are resolved. That's why it's especially important to come in for a visit to get things on the go as soon as possible, before this year's dental insurance expires. So give us a call!

Are your prevention efforts effective?

6 ways to an ageless smile!

Teach your kids well!

In A Heartbeat

Prevent periodontal disease

Periodontal or gum disease has been called the *Silent Disease* because initially there are no symptoms. If your gums are red, sometimes bleed when you brush, feel tender, or look swollen ...these are symptoms of periodontal disease. If your mouth tastes unpleasant ...that's another symptom. If your gums have receded ... you may have had gum disease for some time. Receding gums, and bone and tooth loss, are unattractive alternatives to healthy gums. But there's more at stake! Gum disease has been linked to cardiovascular and other systemic diseases.

■ **Studies have found oral bacteria from gum infections in arterial plaque, and have also shown that therapy for periodontal disease lessens**

inflammation throughout the body.

■ **Poor oral health has been identified as a stronger predictor of heart disease than other risk factors such as low levels of good cholesterol, high levels of a clotting agent, and high levels of certain fats in the bloodstream.**

■ **Long-term and short-term studies continue to clarify the links between oral bacteria, inflammation, and systemic diseases.**

The Surgeon General in his *Report on Oral Health in America* said that the mouth is the gateway to the body, that you cannot be healthy without oral health, and that oral and general health are inseparable. Together, we can prevent and sometimes reverse gum disease. Brush, floss, and keep regular preventive, diagnostic, and maintenance dental appointments.

TOP: Without brushing and flossing, bacteria have the potential to damage your gums which could eventually lead to tooth loss.

BOTTOM: Research has shown that we see teeth as whiter when they are surrounded by pink gums.

Thank you for all your referrals. We appreciate them!

5 TOP TIPS

4 Prevention

Here's a menu to keep you smiling!

Online or off, the digital world can present some risks to the unwary. For example, research suggests that young teenagers tend to consume more sugary snacks during prolonged gaming, which in turn can increase the likelihood of tooth decay. As well, teeth whitening products which are accessible online may not be a safe choice at any age, because they could harm gums and damage teeth enamel. When it comes to good oral health, trust your dental team.

Here are 5 tips for every member of your family:

- See us first to make sure your mouth, teeth, and gums are healthy before starting any whitening program.
- Choose one of our supervised whitening options for safety and the maximum results only we, your dental care team, can provide.
- Stick with your maintenance schedule to keep your smile bright. No whitening is permanent and regular professional cleaning is essential to remove stains and the tartar that can cause gum disease.
- Keep sweet food, desserts, and drinks to mealtimes and brush thoroughly afterwards. It's consumption over extended time periods that heightens the risk of decay.
- Acidic food and drinks can be just as harmful to your teeth as sugar. The acid erodes tooth enamel and can make your teeth sensitive, more vulnerable to cavities, and unattractive.

Virtual reality can be a great place to visit at any age, however real-time brushing and flossing combined with dental visits are still the best for problem prevention to safeguard smiles.

INSIDIOUS INFILTRATORS

Fact: Gum disease is linked to, and may impact, other serious health issues including type-2 diabetes.

Both of these diseases affect millions – children and seniors as well as those in the prime of life. Just as approximately half of type-2 diabetes sufferers have no symptoms, in the earliest stage of gum disease (called *gingivitis*), you might not even realize you have it.

WATCH FOR WARNING SIGNS:

- red or tender gums
- bleeding when brushing or flossing
- chronic bad breath
- receding gums
- loose teeth

Regular recare visits help us monitor developing oral health conditions that have the potential to adversely affect your overall body health. If you don't know you have a disease, you can't treat it ... but we can detect gum disease and treat it right away!

A GREAT GRIN IS *Ageless*

Restorations will give you reason to smile

Studies show that people in cultures that do not focus on oral health often suffer a litany of related and progressive health problems. Gum disease and tooth loss have been correlated with cognitive decline as well as hearing loss in later years, for example. Because of this, it is vitally important to ensure lost or damaged teeth are replaced or restored promptly to insure you can eat and speak properly, avoid further damage, feel good about your appearance, and maintain your positive outlook.

Ensuring healthy gums and teeth that last a lifetime begins with good oral care in childhood, but sometimes teeth can become damaged, broken, or lost. We can restore and replace teeth with beautiful esthetics at any stage of your life...

- **Inlays** are tooth-colored fillings for the biting surfaces of molars.
- **Onlays**, also tooth-colored restorations, sit on the biting surfaces and wrap over one or more cusps of molars.
- **Veneers** offer beautifully shaped straight white teeth while hiding small imperfections.
- **Crowns** cap individual teeth, lending support to compromised structure.
- **Bridges** effectively replace a lost tooth with a replacement tooth, using adjacent teeth as anchors.
- **Implants** are a secure permanent way to replace one or more missing teeth.

Call today to book your consultation to discuss solutions designed for your individual presentation, preference, and budget. Don't wait to restore your smile... Your good health depends on it.

“Ascared” Of The Dentist?

Not your kid!

Kids' fear of “going to the dentist” is usually anticipatory and unfounded. Here are a few tips to help eradicate the potential for life-time dental anxiety by ensuring positive dental experiences throughout childhood.

Show no fear. Even if you experience anxiety, do not communicate this to your child.

Set the bar high.

Demonstrate excellent home care and encourage your child to practice at an age-appropriate level. Pitch in when necessary.

Start early. Call us to discuss the best time to start your child's dental visits, beginning with a get-to-know-us appointment, and if we complete an oral exam, you will be right by your child's side. Afterwards, make the day even more special by going out to lunch or catching a movie together.

Instill pride. Praise your child for taking good care of their smile ...not for their bravery.

Ice Cream Owww!

Icy incidents

How fast can you say *sphenopalatine ganglioneuralgia*? It's the scientific name for “brain freeze.” It happens when you eat something very cold very quickly. You can try pressing your tongue to the roof of your mouth to warm it, but it's best to eat things like ice cream slowly to avoid the discomfort which, weirdly, you feel in your forehead.

That's because when the affected blood vessels signal the largest cranial nerve, your brain interprets the pain as a headache. The trigeminal nerve is also the culprit behind many head, neck, and face aches that are actually generated by the temporomandibular jaw joint. It's no wonder that some sufferers of Temporomandibular Joint Disorder (TMD), a dysfunction of the jaw, don't think to ask their dentist.

Ask us. We'll inform your brain, not freeze it!

Making All The Difference!

Crown & bridge treatment

Improving your smile enhances more than appearance. True, repairing structural problems like missing teeth with crowns and bridges can only make you look better ...even your best. But when function is restored, so will your ability to chew, speak, and socialize freely.

Here are some crown and bridge facts:

- A crown is a cap that covers a damaged tooth. It helps restore its normal shape and size - and strengthens it.

- When a replacement tooth is required to fill a gap, it can be affixed permanently with a bridge attached to the teeth on either side of the space.

- If a space is left untended, the surrounding teeth will drift, alter your bite, encourage cavities, and negatively affect your appearance - beyond the original gap.

- High-tech materials along with custom fitting result in a strong, natural-looking restoration.

- It takes only one or two visits to the dentist to restore your smile and prevent further problems.

- No one will know you have a crown and/or bridge unless you tell them.

Could you benefit from crown and bridge treatment? You may be an excellent candidate. Please consult with a dentist. A crown and bridge can make all the difference.

Referrals Inspire Us

...To raise the bar

We love it when our patients refer us to family and friends. It speaks volumes to how much you trust us to provide you with the best possible oral health care. And it even goes beyond that. Your referrals inspire us!

Every time you refer our practice to people you care about, it re-energizes our commitment to ensure that your entire experience at our practice is relaxing, comfortable, and even educational - from the time you arrive, to the attention, care, and support you are given while you're here - to our continued communication beyond your appointment. It compels us to continually raise the bar and discover new ways we can provide you with even more.

So, please keep the referrals coming. Your inspiration benefits everyone - you, as well as your family and friends.

Say Yes! Fresh Breath...

Who hasn't worried from time to time about their breath? Recurrent bad breath is almost always caused by bacteria in the mouth that releases foul-smelling gases with distressing results. Inadequate cleaning of your teeth, gums, and tongue leaves behind food debris which eventually produce the bacteria. There can be, however, other more serious causes of bad breath. Gum disease is often responsible. Sinus or lung infections, some forms of diabetes, and kidney or liver malfunctions can also be a cause.

Often we can't tell if we have bad breath. Here's one detection method: Lick your wrist, wait a few seconds, then smell. Does your wrist have a bad odor?

If you exercise good oral hygiene and you still suffer from bad breath, talk to us! We can help!
